

## Remember

---

- ☐ Java is a case sensitive language like C and C++
- ☐ Java is nearly 100% object oriented language
- ☐ In java, it is not possible to make a function which is not a member of any class (as we can do in C++)

## First Program

---

```
public class HelloWorld
{
    public static void main(String [] args)
    {
        System.out.println("Hello World");
    }
} // do not put semicolon here
```
