

import

- ❑ import is a keyword in Java
- ❑ It is used to import classes of other packages

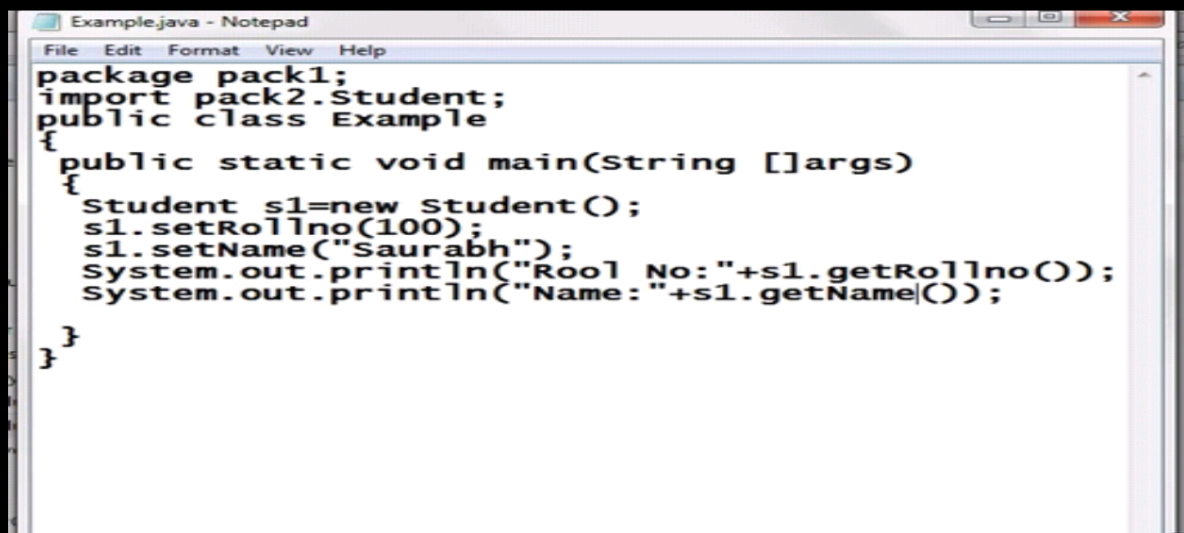

Example

```
Student.java - Notepad
File Edit Format View Help
package pack2;
public class Student
{
    private int rollno;
    private String name;
    public void setRollno(int r)
    { rollno=r; }
    public void setName(String n)
    { name=n; }
    public int getRollno()
    { return(rollno); }
    public String getName()
    { return(name); }
}
```

A screenshot of a Notepad window titled "Example.java - Notepad". The window has a menu bar with "File", "Edit", "Format", "View", and "Help". The text area contains the following Java code:

```
package pack1;
import pack2.Student;
public class Example
{
    public static void main(String []args)
    {
        Student s1=new Student();
        s1.setRollno(100);
        s1.setName("Saurabh");
        System.out.println("Roll No:"+s1.getRollno());
        System.out.println("Name:"+s1.getName());
    }
}
```
